fact:
There’s more than one way to fight type 2 diabetes.

FARXIGA is a prescription medicine used in adults with type 2 diabetes to:

- improve blood sugar control along with diet and exercise
- reduce the risk of hospitalization for heart failure

FARXIGA should not be used to treat people with type 1 diabetes or diabetic ketoacidosis (increased ketones in your blood or urine).

Please see Important Safety Information throughout and on pages 6 and 7, and visit www.FARXIGAMedGuide.com for Medication Guide, and www.FARXIGAPI.com for US Full Prescribing Information for FARXIGA.
Along with diet and exercise, FARXIGA® (dapagliflozin), alone or in combination with other diabetes medicines, has been proven to help lower A1C in adults with type 2 diabetes. If you’re not reaching your A1C goal with metformin, diet, and exercise, talk to your doctor about adding FARXIGA, the pill that starts with f.

Important Safety Information for FARXIGA® (dapagliflozin) 5 mg and 10 mg tablets

Do not take FARXIGA if you:
• are allergic to dapagliflozin or any of the ingredients in FARXIGA. Symptoms of a serious allergic reaction may include skin rash, raised red patches on your skin (hives), swelling of the face, lips, tongue, and throat that may cause difficulty in breathing or swallowing. If you have any of these symptoms, stop taking FARXIGA and contact your healthcare provider or go to the nearest hospital emergency room right away
• have severe kidney problems or are on dialysis. Your healthcare provider should do blood tests to check
Important Safety Information for FARXIGA® (dapagliflozin)

how well your kidneys are working before and during your treatment with FARXIGA

FARXIGA may cause serious side effects including:

- **Low blood sugar (hypoglycemia)** can occur if you take FARXIGA with another medicine that can cause low blood sugar, such as sulfonylureas or insulin. Symptoms of low blood sugar include shaking, sweating, fast heartbeat, dizziness, hunger, headache, and irritability. Follow your healthcare provider’s instructions for treating low blood sugar

Please see Important Safety Information on pages 6 and 7.
In clinical studies, FARXIGA:

- Helped lower A1C*  
- Removed some blood sugar†

Additionally, FARXIGA:

- Reduced weight on average 3%‡  
- Lowered systolic blood pressure†

*Primary endpoint. †With FARXIGA at 12 weeks. ‡When used with metformin. Individual results may vary.

FARXIGA is not a weight-loss or blood-pressure drug.

Important Safety Information for FARXIGA® (dapagliflozin) (cont’d)

FARXIGA may cause serious side effects including:
- **Dehydration** (the loss of body water and salt), which may cause you to feel dizzy, faint, lightheaded, or weak, especially when you stand up (orthostatic hypotension). You may be at a higher risk of dehydration if you have low blood pressure; take medicines to lower your blood pressure, including water pills (diuretics); are 65 years of age or older; are on a low salt diet; or have kidney problems
FARXIGA may cause serious side effects including:

- **Low blood sugar (hypoglycemia)** can occur if you take FARXIGA with another medicine that can cause low blood sugar, such as sulfonylureas or insulin. Symptoms of low blood sugar include shaking, sweating, fast heartbeat, dizziness, hunger, headache, and irritability. Follow your healthcare provider’s instructions for treating low blood sugar.
FARXIGA works differently to rid your body of some sugar

FARXIGA removed approximately 70 grams of sugar in the urine per day.*

*In a study of adults with type 2 diabetes at week 12 with FARXIGA.
How FARXIGA works

FARXIGA® (dapagliflozin) is part of a class of type 2 diabetes medications called SGLT2 (sodium-glucose cotransporter 2) inhibitors. It’s just one pill a day taken in the morning with or without food.

1. Blocks some sugar from being absorbed by your body
2. Removes some sugar when your body has more than it needs
3. Flushes some sugar out of your body through your urine

Important Safety Information for FARXIGA® (dapagliflozin) (cont’d)

Do not take FARXIGA if you:
- have severe kidney problems or are on dialysis. Your healthcare provider should do blood tests to check how well your kidneys are working before and during your treatment with FARXIGA

Please see Important Safety Information throughout.

Program managed by Fpskx, LLC, on behalf of AstraZeneca Pharmaceuticals LP. Fingertip Formulary is a registered trademark of Fingertip Formulary, LLC.

Please see accompanying US Full Prescribing Information, and Medication Guide. Subject to eligibility. Restrictions apply. Not available for government-insured patients. See back of card for details.
ELIGIBILITY: You may be eligible for this offer if you are insured by commercial insurance and your insurance does not cover the full cost of your prescription, or you are not insured and are responsible for the cost of your prescriptions. Patients who are enrolled in a state or federally funded prescription insurance program are not eligible for this offer. This includes patients enrolled in Medicare Part D, Medicaid, Medigap, Veterans Affairs (VA), Department of Defense (DOD) programs or TRICARE, and patients who are Medicare eligible and enrolled in an employer-sponsored group waiver health plan or government-subsidized prescription drug benefit program for retirees. If you are enrolled in a state or federally funded prescription insurance program, you may not use this savings card even if you elect to be processed as an uninsured (cash-paying) patient. This offer is not insurance, is restricted to residents of the United States and Puerto Rico, and to patients over 18 years of age.

TERMS OF USE: Eligible commercially insured patients with a valid prescription for FARXIGA® (dapagliflozin) who present this savings card at participating pharmacies will pay as low as $0 per 30-day supply; maximum savings limit applies; patient out-of-pocket expense may vary. If you pay cash for your prescription, AstraZeneca will pay up to the first $150, and you will be responsible for any remaining balance, for each monthly prescription. Other restrictions may apply. Patient is responsible for applicable taxes, if any. Non-transferable, limited to one per person, cannot be combined with any other offer. Void where prohibited by law, taxed or restricted. Patients, pharmacists, and prescribers cannot seek reimbursement from health insurance or any third party for any part of the benefit received by the patient through this offer. AstraZeneca reserves the right to rescind, revoke, or amend this offer, eligibility and terms of use at any time without notice. This offer is not conditioned on any past, present or future purchase, including refills. Offer must be presented along with a valid prescription at the time of purchase. For additional details about this offer, please visit www.FARXIGAsavings.com. If you have any questions regarding this offer, please call 1-844-631-3978.

BY USING THIS CARD, YOU AND YOUR PHARMACIST UNDERSTAND AND AGREE TO COMPLY WITH THESE ELIGIBILITY REQUIREMENTS AND TERMS OF USE.
Managing type 2 diabetes can be easier when you get help along the way. When you sign up for support from FARXIGA® (dapagliflozin), you’ll receive a welcome package and a series of e-mails with:

FARXIGA Prescription Coverage Counselors†
We have Prescription Coverage Counselors who can talk to you on the phone about your FARXIGA coverage and benefit verification. They can help you determine your co-pay amount and what information you’ll need to process your benefit verification.

Visit FARXIGA.com or call 1-855-3FARXIGA to find out more.

*FARXIGA Care Partners cannot provide medical advice and can only provide information about AstraZeneca medications. Decisions regarding your health and treatment of your condition should be made with your own healthcare provider.

†Prescription Coverage Counselors do not file claims or appeals on behalf of patients or healthcare professionals. Coverage or co-pay amounts may change prior to the time of actual prescription fill.
Important Safety Information for FARXIGA® (dapagliflozin) 5 mg and 10 mg tablets

Do not take FARXIGA if you:

• are allergic to dapagliflozin or any of the ingredients in FARXIGA. Symptoms of a serious allergic reaction may include skin rash, raised red patches on your skin (hives), swelling of the face, lips, tongue, and throat that may cause difficulty in breathing or swallowing. If you have any of these symptoms, stop taking FARXIGA and contact your healthcare provider or go to the nearest hospital emergency room right away

• have severe kidney problems or are on dialysis. Your healthcare provider should do blood tests to check how well your kidneys are working before and during your treatment with FARXIGA

FARXIGA may cause serious side effects including:

• Dehydration (the loss of body water and salt), which may cause you to feel dizzy, faint, lightheaded, or weak, especially when you stand up (orthostatic hypotension). You may be at a higher risk of dehydration if you have low blood pressure; take medicines to lower your blood pressure, including water pills (diuretics); are 65 years of age or older; are on a low salt diet; or have kidney problems

• Ketoacidosis occurred in people with type 1 and type 2 diabetes during treatment with FARXIGA. Ketoacidosis is a serious condition which may require hospitalization and may lead to death. Symptoms may include nausea, tiredness, vomiting, trouble breathing, and abdominal pain. If you get any of these symptoms, stop taking FARXIGA and call your healthcare provider right away. If possible, check for ketones in your urine or blood, even if your blood sugar is less than 250 mg/dL

• Kidney problems. Sudden kidney injury occurred in people taking FARXIGA. Call your healthcare provider right away if you reduce the amount you eat or drink, or if you lose liquids; for example, from vomiting, diarrhea, or excessive heat exposure

Important Safety Information for FARXIGA® (dapagliflozin) (cont’d)

• **Serious urinary tract infections (UTI)**, some that lead to hospitalization, occurred in people taking FARXIGA. Tell your healthcare provider if you have any signs or symptoms of UTI including a burning feeling when passing urine, a need to urinate often, the need to urinate right away, pain in the lower part of your stomach (pelvis), or blood in the urine with or without fever, back pain, nausea, or vomiting

• **Low blood sugar (hypoglycemia)** can occur if you take FARXIGA with another medicine that can cause low blood sugar, such as sulfonylureas or insulin. Symptoms of low blood sugar include shaking, sweating, fast heartbeat, dizziness, hunger, headache, and irritability. Follow your healthcare provider’s instructions for treating low blood sugar

• **Bacterial infections under the skin of the genitals and areas around them**. Rare but serious infections that cause severe tissue damage under the skin of the genitals and areas around them have happened with FARXIGA. This infection has happened in women and men and may lead to hospitalization, surgery and death. Seek medical attention immediately if you have fever or you are feeling very weak, tired or uncomfortable and you also develop any pain or tenderness, swelling, or redness of the skin in the genitals and areas around them

• **Vaginal yeast infections** in women who take FARXIGA. Talk to your healthcare provider if you experience vaginal odor, white or yellowish vaginal discharge (discharge may be lumpy or look like cottage cheese), or vaginal itching

• **Yeast infection of skin around the penis (balanitis)** in men who take FARXIGA. Talk to your healthcare provider if you experience redness, itching, or swelling of the penis; rash of the penis; foul smelling discharge from the penis; or pain in the skin around penis. Certain uncircumcised men may have swelling of the penis that makes it difficult to pull back the skin around the tip of the penis

**The most common side effects of FARXIGA** include yeast infections of the vagina or penis, and changes in urination, including urgent need to urinate more often, in larger amounts, or at night.
Important Safety Information for FARXIGA® (dapagliflozin) (cont’d)

Before you take FARXIGA, tell your healthcare provider about all of your medical conditions (including kidney, liver, bladder, or pancreas problems) and medicines you take; if you have had or have risk factors for ketoacidosis (including type 1 diabetes, are eating less due to illness, surgery, a change in your diet, are going to have surgery, or binge drink); if you are pregnant, or plan to become pregnant, as FARXIGA may harm your unborn baby; and, if you are, or are planning to breastfeed as it is unknown if FARXIGA passes into breast milk.

Approved Uses for FARXIGA® (dapagliflozin)

FARXIGA is a prescription medicine used in adults with type 2 diabetes to:

- improve blood sugar control along with diet and exercise
- reduce the risk of hospitalization for heart failure

FARXIGA should not be used to treat people with type 1 diabetes or diabetic ketoacidosis (increased ketones in your blood or urine).

You may report side effects related to AstraZeneca products by clicking here.

If you can’t afford your medication, AstraZeneca may be able to help. For more information, please visit www.AstraZeneca-us.com.
Questions to ask your doctor if you haven’t reached your goals

**About your A1C**
1. What is my A1C now?
2. What is my A1C goal?
3. How long should it take me to meet my A1C goal?

**About FARXIGA® (dapagliflozin)**
1. Could including FARXIGA help me meet my goal?
2. How does FARXIGA work to reduce blood sugar?
3. In what other ways could FARXIGA help me?

**Things to ask at the end of your appointment**
1. What changes were made to my treatment plan?
2. How often should I check my blood sugar?
3. When should I schedule my next appointment?
